## Investigating a Drop in Users' Engagement

Why are users' interaction with the platform declining in the month of August?

- 1. After first checking the users activity hours shown in Query 1 graph, the rate looks normal. We can assume that the dive on engagements is not from new users, but rather from users that have been active members for a good period of time.
- 2. The second hypotheses in my list was the unavailability from users to use the website when trying to log in, connect or navigate this.
  - a. After checking the user engagement in different devices, we see a strong decrease in users who usually tend to use their phones and tablets to access the platform.
    - i. With this we can strongly assume that the software being use in the platform might not be functioning very well in phones and tablets and should be one of the first aspects to be check when prioritizing for ways to fix this problem.
- 3. To fix the problem:
  - a. The company should contact and make aware the corresponding department about the findings in this report.
  - b. The company should also contact users about the outgoing problem as soon the reported analysis is verified to be in fact the actual problem.
